PURE CLEAN AIR

Industrial exhaust systems should always function perfectly, because only then you will be sure that the indoor air is really clean. Next to detailed advice and installation of Plymovent, you can also expect to receive a perfect advice for maintenance.

FILTER REPLACEMENT, PART OF MAINTENANCE

Regular maintenance is of great importance in the manufacturing industry. Maintenance of fume and dust extraction is necessary so that clean and safe indoor air in the workplace is guaranteed. Filter replacement is an important part of the maintenance.

Plymovent noticed that specially in the summer, when companies plan extensive maintenance, it is a good time to replace the filters. Or in autumn, when windows and doors

need to be closed because of the cold weather, it's very important that the industrial exhaust system functions perfectly.

This guide helps you by identifying what kind of filter needs to be replaced. For more information about replacing the filters and safety regulations we refer you to the manual.

You should always replace the filter cartridge if it is damaged.

CLEAN AIR AT WORK

High-quality welding fume extraction and filtration systems in the metalworking industry are long-term investments. They create a cleaner and healthier work environment. Welders and other personnel will notice the difference (disappearance of the visible blue layer of welding fumes) immediately. The result: improved work performance, increased productivity and less absence due to illness. On top of that, your machinery will stay cleaner, lowering your company's maintenance costs.

PLYMOVENT®
clean air at work
